

PROTECT YOUR BUSINESS FROM CYBER THREATS USING SKYMINDER

SIMPLE, EASY TO READ AND USER FRIENDLY

In a digital world, cyber risk needs to be managed very carefully and with the highest level of priority by businesses and governments. **The risk of a cybercrime, is growing day by day and is a real threat for operations: it isn't only an IT problem but could negatively affect all functions across a business or a public body.**

A cyber attack or a data breach causes business and reputational damages, as well as regulatory and compliance issues.

Supply chain continuity and quality are at risk due to unexpected disruptions that can cause a loss of money, competitive advantage and market share reduction due to a negative impact on relationships with customers and suppliers.

As all companies are digitally connected, **every company of every size in every sector is exposed to multiple cyber threats. This is why every business is required to put in place internal practices to prevent a cyber attack and at the same time have a good knowledge of potential risks related to current or potential partners.**

The KYND CYBER RISK REPORT provided by SKYMINDER gives business managers, owners and professionals the knowledge to easily assess cyber risk related to business partners, highlight vulnerabilities and help protect the company before any business disruption occurs to customers or suppliers.

SIMPLE, EASY TO READ AND USER FRIENDLY

KEY BENEFITS

- **APPLICABLE TO ANY KIND OF BUSINESS**

The KYND Cyber Risk Report **can be applied to any business, any company size and any industry.**

- **SIMPLE AND FRIENDLY**

IT expertise is not required to understand the KYND Cyber Risk Report content. The KYND Cyber Risk Report keeps everything simple, easy to understand **and provides a clear and concise summary of the cyber risk results.**

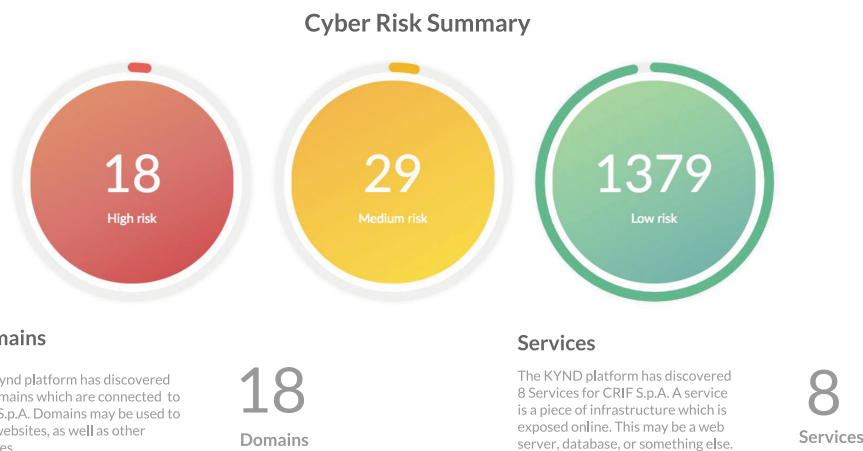

- **EASY TO REQUEST AND GET RESULTS**

The KYND Cyber Risk Report doesn't need long questionnaires to be filled out, lengthy conversations with consultants or access provided to networks and systems to identify cyber risk. Simply access SkyMinder, choose the country where the company to be analysed is located, fill in the required form and give the company's website(s) (up to two) and in a few days a KYND Cyber Risk Report will be available in your SkyMinder My Reports section.

- **SMART RESULTS**

Through a traffic light system – red, amber, green – the cyber risk exposure is immediately clear so quick decisions for further actions can be enabled.
